### Education

---

**Ph.D. Chemistry**, March, 2010  
The Ohio State University (Columbus, OH, USA)

**B.S. Chemistry**, February, 2005  
State University of New York at Buffalo (Buffalo, NY, USA)

### Professional Experience

---

**Staff Scientist, Canadian Light Source** 2018-present

Lead scientist for the High Energy Wiggler Beamline at the Brockhouse sector. Responsible for developing and running the user program, enhancements of the beamline, delegation of tasks to science associates, and conducting a personal research program.

**Independent Research Consultant** 2017

Worked as a self-employed contractor performing local structure analysis.

**Staff Scientist, Los Alamos National Laboratory** 2013-2016

Responsible for the operation of the HIPD neutron diffractometer and the science program of this instrument. Co-responsible for the NPDF instrument. Research topics include advanced powder crystallography, magnetic structure determination, and pair distribution function analysis. Managed several work-for-others contracts with industrial partners.

**Postdoctoral Associate, Los Alamos National Laboratory** 2010-2013  
Mentor: Dr. Anna Llobet

Research efforts were mainly focused on the study of the local structures of inorganic extended solids using the pair distribution function method. Also worked in the areas of crystal and magnetic structure determination. Assisted in the operation of the HIPD and NPDF neutron diffractometers and Lujan Center user program. Supervised the research of an undergraduate summer student.

**Graduate Associate, The Ohio State University** 2005-2010  
Advisor: Prof. Patrick M. Woodward

Main project involved the synthesis, structural, magnetic, and electronic characterization of new perovskite compounds which have ordering on both the *A* and *B*-cation sub-lattices for potential application as multiferroic materials. Methods include X-ray and neutron powder diffraction, SQUID magnetometry, UV-Vis diffuse reflectance spectroscopy, impedance spectroscopy, and differential scanning calorimetry. Other projects involved the *ab initio* structure determination of usually complex perovskites as well as molecular compounds from powder diffraction data. Supervised the research of three undergraduate students. Taught general chemistry courses for 10 quarters.

**Undergraduate Research Assistant, SUNY Buffalo**

2004-2005

Advisor: Prof. Philip Coppens

Projects involved crystal structure determination by single crystal X-ray diffraction including time resolved studies of photo-induced excited state molecular geometries, and the synthesis and crystal growth of coordination compounds.
